

Handy-Bundler remove the need to box or tape your products

Using the **Handy-Bundler** you can create stable 'bundles' of products that will easily stack as a 'brick' onto a pallet.

Simply place the product onto the wrapper and using inexpensive mini-rolls of stretch film you can create a bundle in seconds!

The Handy-Bundler is fully adjustable and will wrap a wide range of products regardless of their shape.

As easy as 1, 2, 3

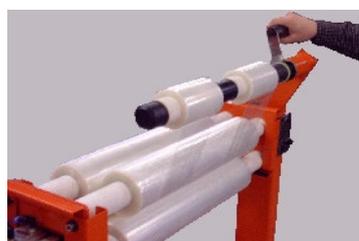

- 1) Load the wrapping film on to the quick release mandrel arm and you're ready to wrap!

- 2) Place the product in-between the adjustable end supports.

- 3) Turn the handle to wrap the product before removing the 'block' from the bundler

Because the film is wrapped completely around the product, under tension, the package is held tight and stable.

The **The Handy-Bundler** is easy to use and owing to its unique design you do not have to remove the wrapping forks that cause so many problems with many other systems.
